

SECTION 4

SEA Statement

INTRODUCTION

1.1 Terms of Reference

Kerry County Council undertook the process of a Strategic Environmental Assessment (SEA) in parallel with the preparation of the Kenmare Functional Area Local Area Plan (FALAP) 2010-2016.

A SEA is a systematic evaluation of the likely significant effects of implementing a Plan or Programme before it is adopted. Directive 2001/42/EC on the assessment of the effects of certain plans and programmes on the environment was transposed into Irish law under:

- The European Communities (Environmental Assessment of Certain Plans and Programmes) Regulations 2004 (S.I. No. 435 of 2004)
- The Planning and Development (Strategic Environmental Assessment) Regulations 2004 (S.I. No. 436 of 2004)

The draft Plan and the Environmental Report were put on public display and all submissions and proposed amendments to the draft Plan were reviewed by Planning Authority. Amendments were made to the Environmental Report by way of an addendum document to reflect the findings of that exercise. This approach helped to ensure that potential adverse effects of the Plan on the environment were identified and avoided or mitigated against.

This document (the SEA Statement) of the Kenmare FALAP 2010-2016 forms the final stage of the requirements for the Strategic Environmental Assessment (SEA) of the Plan and is prepared in conjunction with the final adopted plan. This SEA Statement is a requirement of S.I. No. 436 of 2004. These Regulations set out the information to be included in a SEA Statement. These requirements are discussed in the following section.

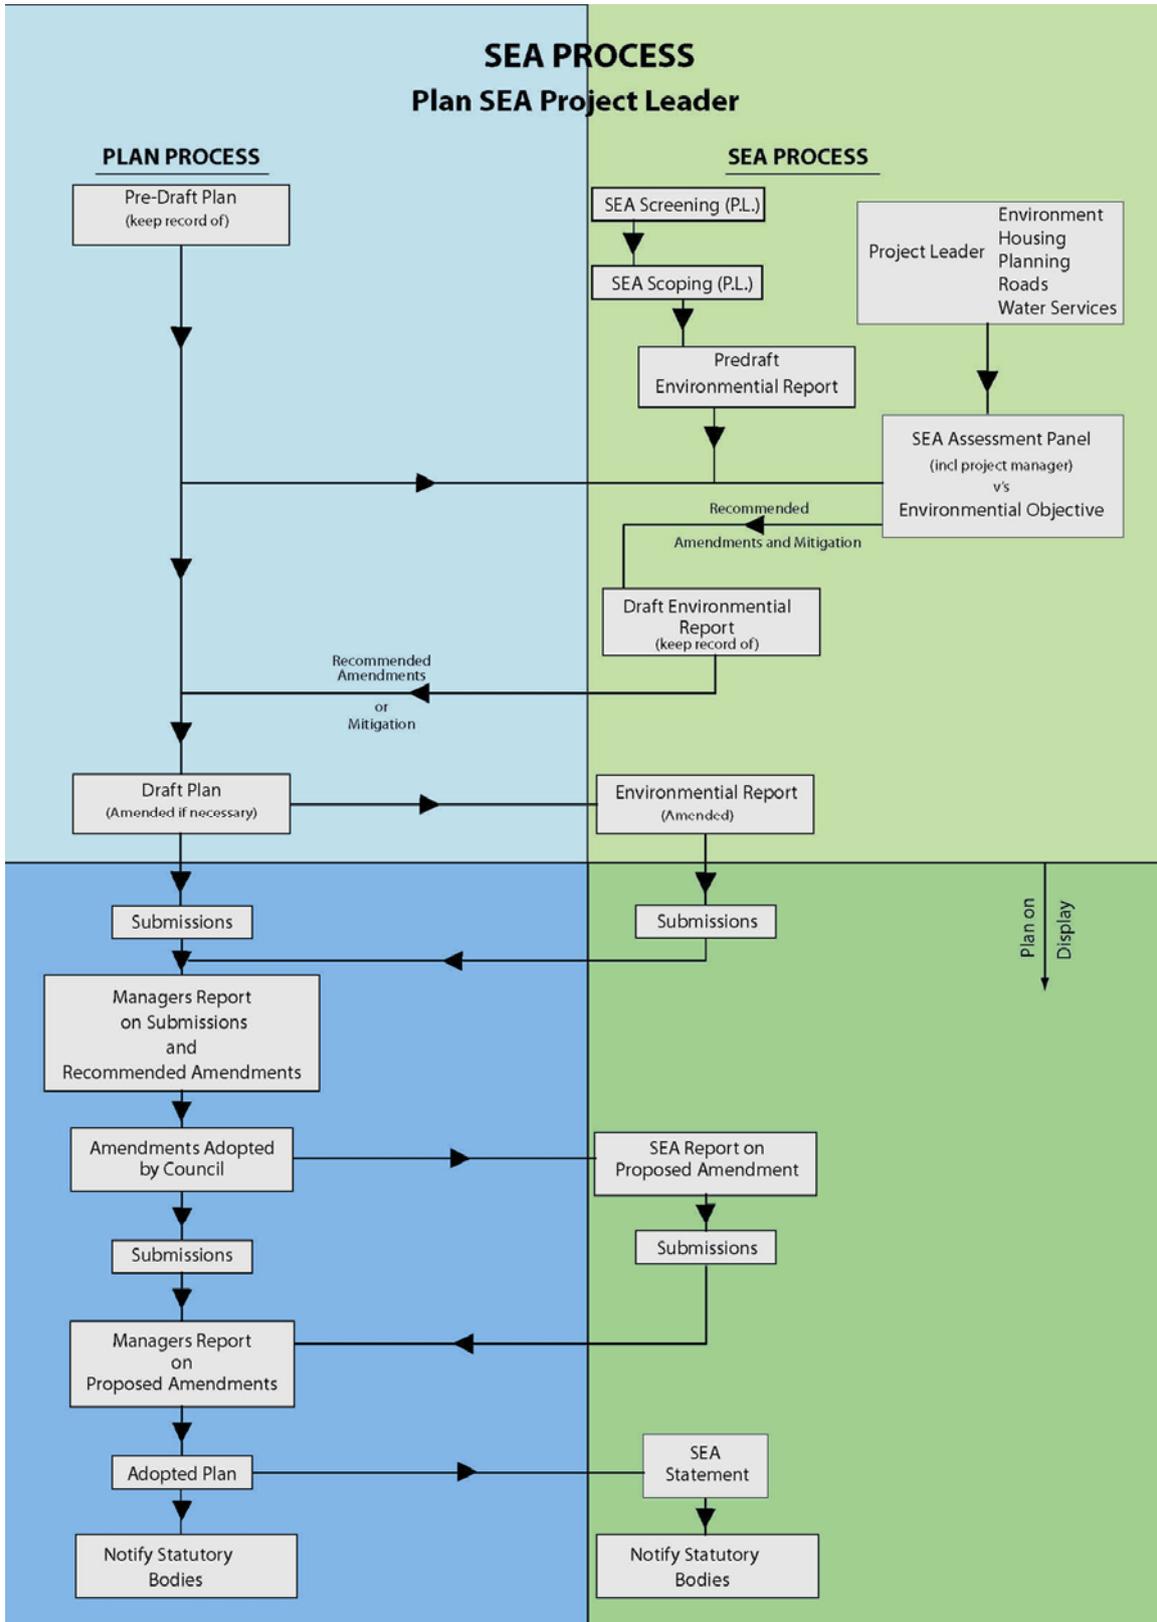

1.2 Content of the SEA Statement

The SEA Statement is required to include information summarising: -

1. How environmental considerations have been integrated into the plan
2. How the environmental report, any submission or observation to the planning authority in response to a notice under section 12(1) or (7) of the Act, and any consultations under article 13 F have been taken into account during the preparation of the plan
3. The reasons for choosing the plan, as adopted, in light of the other reasonable alternatives dealt with, and
4. The measures decided upon to monitor, in accordance with Article 13J, the significant environmental effects of implementation of the plan

Each of these individual criteria will be addressed in separate sections of this SEA Statement. The interaction between the SEA Team and the Planning Policy Unit in Kerry County Council in preparing the Kenmare Functional Area Local Area Plan is shown in Figure 1.1.

FIGURE 1.1 SEA AND PLAN INTERACTION

2 INCORPORATION OF ENVIRONMENTAL ISSUES INTO THE PLAN

2.1 Introduction

The SEA process can be broken down into a number of steps. At each stage of the process the impacts of the Plan on the environment and the public is assessed. Where it was assessed that the Plan may conflict with the environmental objectives then mitigation measures were proposed. The mitigation measures were predominately in the form of an amendment to or the addition of an objective in the draft Plan. The draft Plan was assessed during the following phases: -

- Scoping – consultation with the statutory consultees and non statutory consultees
- Evaluation of draft Plan objectives and policies (included in environmental report)
- Evaluation of submissions and observations to draft Plan
- Evaluation of proposed amendments to draft Plan
- Evaluation of amendments to draft Plan.

2.1.1 Scoping

The scoping report for *the Strategic Environmental Assessment of the Functional area Local area plan* outlines the procedures undertaken in the preparation of the Scoping Report and was prepared in parallel with the Draft Functional Area Local Area Plan, which was carried out between January and November 2009. The integration of the SEA and the plan was achieved through close liaison between personnel delivering the SEA and the Function Area Local Area Plan itself. This included the key stages of scoping, the review of the existing situation in the area and the assessment of the Local Area Plan objectives. The scoping process also considered the Plan alternatives, environmental objectives, targets, indicators and monitoring arrangements. The overall outcome of the scoping process was to focus attention and resources on the most important environmental issues as a result of implementing the Plan. The internal procedures for integrating the plan process with the SEA process are outlined in fig 1.1.

2.1.2 Evaluation of pre-release draft Plan Objectives and policies

Section 2 of the Environmental Report outlines the methodology of preparing the draft Plan and the Environmental Report. The Environmental Report evaluated the likely significant impacts of implementing the draft Plan on the environment using the baseline environmental data collected during the scoping process. As stated above the purpose of the Environmental Report was used to assess the likely significant effects of the Plan on the environment and to ensure that these significant impacts are considered during the preparation of the draft Plan.

The Environmental Report also considered a number of alternatives to the Plan. These alternatives were assessed and a preferred strategy chosen. This is further discussed in Section 4 of this SEA Statement

The Environmental Report also outlined mitigation measures to remedy/reduce any potential significant impacts and a monitoring programme was developed to assess the impacts of the Plan on the environment. The monitoring programme is shown in Section 5 of the SEA Statement.

2.1.3 Evaluation of draft Plan Objectives and policies

Section (f) of the Schedule 2B of the SEA Regulations requires an assessment of the likely significant effects of the Plan on the environment. The Plan objectives were assessed against the Environmental Protection objectives in the Environmental Report prior to the release of the draft Functional Area Local Area Plan. The Environmental Objectives set out in Section 4 of the Environmental Report and further in the associated SEA addendum document, are described under a range of topics and are used as the standards against which the future development objectives of the Plan can be evaluated, to help to identify areas in which significant adverse impacts are likely to occur.

2.1.4 Evaluation of proposed amendment to draft Plan

The assessment of the proposed amendments to the Draft Functional Area Local Area Plan after public consultation and receipt of submissions was carried out by assessing each of the proposed amendments against environmental protection objectives created as part of the SEA. An initial screening process was conducted to determine the level or degree of impact that the proposed amendments to the Plan may or may not have on the SEA environmental objectives. A further assessment phase considered the proposed amendments to the Plan that may significantly conflict with the environmental protection objectives. Mitigation measures were recommended where significant conflict may arise. The mitigation measures proposed in the report mainly required the rewording or additional text to a Plan objective. In one case a recommendation not to proceed with an amendment was given. This amendment involved the re-zoning of lands in the rural area outside of Kilgarvan village for commercial purposes.

A total of 49 no. amendments were made to the draft Plan following the consultation period. A large number of the amendments to existing Plan objectives arose from submissions made by the Statutory Consultees (The Environmental Protection Agency, and The Department of the Environment, Heritage and Local Government).

A number of minor amendments were made to other objectives in the draft plan and these were all subjected to an assessment. The findings of the assessment are given in the report prepared by Kerry County Council '*SEA Addendum document Draft Kenmare Functional Area Local Area Plan 2010-2016*'.

3 INCORPORATION OF SUBMISSIONS AND CONSULTATIONS

3.1 Introduction

This section of the SEA statement details how submissions received during the SEA process and draft Plan process were considered during preparation of the Plan.

3.1.1 SEA Scoping Consultation

In this SEA the prescribed environmental authorities consulted were:-

TABLE 3.1 SEA SCOPING CONSULTATION DETAILS

RESPONDENT	ISSUES
OPW	<p>Flood Risk Management Environmental objectives should be included in the plan to minimise the level of flood risk</p>
S.W.R.F.B.	<p>Salmonoid Rivers Maine and Brown Flesk are salmonid rivers and should be given specific mention as protected waters.</p> <p>Flood Plains Maintain flood plains free from infill thereby minimising flooding and ecological impact. Recommend 100 year flood contour be established and kept free from future filling.</p> <p>Land Reclamation Land reclamation subject of waste permitting should be considered in the context of their impact on flood plains.</p> <p>Riparian Zones Protection The LAP's should address riparian zone protection within settlements.</p> <p>Impact on Ecology / Nature Conservation Habitat destruction and pollution due to material removal or works to rivercourses or discharges from development work adjacent to rivers. Should be addressed by</p> <ul style="list-style-type: none"> - Riparian zone protection corridors - Presumption against interference with channels and banksides - Developers should identify potential impacts and prepare detailed drawn mitigation measures. - Certification that foul and surface water drainage in developments is properly controlled. <p>Hydro-Electric Schemes</p> <p>Wastewater Treatment Prioritise settlements with absent or inadequate wastewater treatment for investment in treatment facilities particularly where these settlements are located in sensitive water catchments.</p> <p>Impact on Surface Waters The full range of SUDS measures should be implemented for new development in urban and rural areas.</p>

DCENR	No comment at this stage
NRA	Report should address the effects on human beings of safety, noise, air quality due to proximity to national roads. Visual impacts to and from national roads should be considered
EPA	Water Framework Directive The specific objectives of the <ul style="list-style-type: none"> - South West River Basin District (SWRBD) - River Basin Management Plan (RBMP) - Programme of Measures (POM) should be incorporated in the plan. The plan should include objectives for the issues raised in the 'Water Matters' consultation paper. Infrastructure Planning Adequate infrastructure should be put in place to cater for projected population growth
DOEHLG	Architectural Heritage Plans have potential to impact on the architectural heritage of the area. Opportunity exists to give increased recognition to the value of Architectural Heritage. Plan should assess impact of proposed development on Architectural Heritage. Archaeological Heritage Environmental Objectives should contain a reference to Archaeological Heritage

3.1.2 First Public Consultation

The draft Plan was put on public display on the 18th November 2009 for a period of 6 weeks. This constituted a first public display period. A total of 110 no. submissions were received during the consultation period.

Submissions were received from the Environmental Protection Agency and the Department of Environment, Heritage and Local Government during this period. These submissions were assessed by Kerry County Council for inclusion in the draft Plan.

A County Managers Report and Recommendations on the received submissions was prepared in February 2010.

3.1.3 Second Public Consultation

The amendments to the draft Functional Area Local Area Plan and the associated SEA addendum document went on public display on the 24th of February 2010 for 4 weeks. 12 no. submissions were received during this period. As part of their submission, the EPA recommended that amendment no. 43 should not proceed.

4 THE REASONS FOR CHOOSING THE PLAN AS ADOPTED, HAVING CONSIDERED ALTERNATIVES

4.1 Introduction

The development and assessment of alternatives (or options) is a legal requirement under the SEA Directive. Under Article 5 (O.J. 2001) plans and programme proponents should ensure that:

- Reasonable alternatives taking into account the objectives and the geographical scope of the plan or programme, are identified, described and evaluated (Article 5.1)
- The Environmental Report includes ‘an outline of the reasons for selecting the alternatives dealt with’ (Annex 1(h))
- A statement is prepared summarising ‘... the reasons for choosing the plan or programme as adopted, in the light of the reasonable alternatives dealt with’ (Article 9.1(b)).

This section of the Environmental Report identifies and describes the different development scenarios that were assessed by Kerry County Council and the SEA team. The alternatives were evaluated taking into account the vision of the draft Functional Local Area Plan and the geographical scope of the Plan.

4.2 Description of Alternatives

As part of this plan making process a range of alternatives were considered as follows:-

Alternative strategies are considered within Chapter 4 of the Strategic Environmental Assessment – Environmental Report document prepared for the draft plan document. At the outset the do – nothing or non intervention development strategy and the intervention development strategy were considered. It was decided that the intervention scenario was appropriate on the basis that it would promote the proper planning and sustainable development of the settlements.

Alternative zoning strategies were also considered. The main potentially viable options available were:

- (i) To expand the current zonings to provide for the future development of the town.
- (ii) Consolidate the existing zoning within the existing urban fabric.
- (iii) Reduce the level of zoning in line with the regional and county population protections and zone sufficient land to meet these requirements.

The options considered for infrastructure within the settlements related primarily to the disposal of treated effluent, i.e. whether,

- (A) To allow communal treatment plants in settlement where there was no public treatment system or an overloaded treatment system, or
- (B) Not to allow communal treatment systems where there was no public treatment system or an overloaded treatment system

4.3 Assessment of Alternatives against Environmental Objectives

Kerry County Council has made provision in the plan for sustainable levels of growth within the Functional Area. These growth figures are in accordance with the population targets for the South West Region as issued by the DOEHLG. These targets have been incorporated into the FALAP. Kerry County Council is aware of the potential impact of development on the environment and of the need to ensure that development is planned to ensure the proper planning and sustainable development of the area.

The following sections outline the alternative development options considered by the planning authority in the formulation of the plan with an explanation of why particular options were chosen.

4.3.1 Do-nothing Scenario or Non-Intervention Scenario

What the 'do-nothing scenario' means is that the current plan would be readopted with no material amendments. This in effect would mean ignoring development that had occurred during the period of the last plan and monitoring its implications for the future planning of the settlements. It is necessary to monitor the development of a plan area and react to development in planning for the future. This option would not achieve this. In addition such a scenario would not take into account advances in planning guidance, best practice in planning policy or experience gained through the implementation of the previous plan. This option was ruled out on the basis that it would not promote the proper planning and sustainable development of the settlements.

4.3.2 Intervention Scenario

In this scenario intervention would mean reassessing the plan from first principles and looking at the options available in light of the developments during the period of the last plan, the advances in planning guidance and the overall strategy for the settlements.

4.3.2.1 Zoning

Zoning within the settlements presented a number of choices. The main options available were:

- (i) To expand the current zonings to provide for the future development of the town.
- (ii) Consolidate the existing zoning within the existing urban fabric.
- (iii) Reduce the level of zoning in line with the regional and county population protections and zone sufficient land to meet these requirements.

With the exception of Kenmare and Kilgarvan, all the settlements within the local area plan are small settlements. There was very little scope for developing new residential areas within these settlements. In contrast Kilgarvan and Kenmare in particular, are settlements of significant size in the plan area, and there were a number of options available as outlined above. In particular the long-term future vision for the settlements is that they should consolidate and to limit zoned land to defined requirements arising from regional and county policies. Considering the objective to provide for a compact settlement and the need to make best use of available infrastructure it was considered that the zoning of undeveloped land within the existing urban fabric and de-zoning land on the periphery was a more sustainable option, thereby consolidating the existing settlement pattern.

4.3.2.2 Infrastructure

The options for infrastructure with the settlements related primarily to the provision of roads and the disposal of treated effluent.

In relation to the disposal of effluent the major decision was whether:

- (A) To allow communal treatment plants in settlement where there was no public treatment system or an overloaded treatment system.
- (B) Not to allow communal treatment systems where there was no public treatment system or an overloaded treatment system

It is clear that the quality of groundwater, drinking water and surface water throughout the county is coming under increasing threat and must be protected. Having considered the implications of private wastewater systems failing, changing and more stringent standards, and the possible resultant impact on the environment, it was decided that small communal package treatment plants will not be permitted and only communal plants designed to cater for the entire town or village, or capable of being expanded to do so, will be considered.

4.4 Preferred Strategy

Based on the environmental assessment of the alternative policy scenarios, it was found that Scenario 2, which represents the intervention scenario, was the preferred strategy for the County. This scenario recognises the balance that must be struck between the environment, quality of life and development.

Considering the objective to provide for a compact settlement and the need to make best use of available infrastructure it was considered that it would be appropriate to reduce the level of zoning in line with the regional and county population projections and zone sufficient land to meet these requirements.

Having considered the implications of private wastewater systems failing, changing and more stringent standards, and the possible resultant impact on the environment, it was decided that individual package treatment plants will not be permitted except in the smaller settlements and only communal plants designed to cater for the entire town or village, or capable of being expanded to do so, will be considered.

The preferred strategy was identified as having potentially conflicting interactions with a number of environmental strategic objectives. Accordingly mitigation measures were recommended so as to reduce / eliminate potentially negative impacts and to incorporate additional environmental objectives. The recommended mitigation measures were also assessed and the Plan makes sufficient provision for the protection of the environment through a range of objectives. It is imperative that when implementing the Plan objectives, equal weight is given to development and environmental objectives in order to achieve a balance. If this strategy is adopted mitigation will occur naturally as a result. In general the Functional Local Area Plan (FALAP) strategies will facilitate the concentration of development and infrastructure in a compact and sustainable manner and will reduce the need to provide for such facilities in an ad hoc manner in the open countryside.

It is noted that Amendment No. 43 was adopted by the Council against the recommendations of the SEA and the Manager. The SEA Addendum document had concluded that Amendment No 43, which involved the zoning of lands in the Rural Area, outside of the settlement boundaries for Kilgarvan, was in conflict with a number of Environmental Protection Objectives and was unlikely to be mitigated. Elected members were of the view that the amendment was of sufficient economic importance to the area, so as to justify inclusion in the final plan.

It was also decided by the members that the recommended Mitigation Measure for Amendment 41 (zoning of lands for mixed use purposes) was unreasonable and should not be included in the adopted plan. The Mitigation Measure stated that the development of the lands in question would be contingent on the implementation of Development Objective T2 (junction improvements between the L-7060-33 and the R569). The members were of the view that the Development Objective T2, in itself, together with normal planning criteria and safeguards were sufficient in this instance.

All other recommendations contained in the SEA were accepted by the members and included in the adopted plan.

5 MONITORING PROGRAMME

5.1 Introduction

Under Article 10 and Section (i) of Schedule 2B of the SEA Regulations, monitoring is required in order to identify at an early stage any unforeseen adverse effects caused by the Plan. This allows remedial action to be taken. Monitoring allows the actual impacts of the Plan to be measured against those that were predicted. It allows major problems to be identified and dealt with in a timely fashion, and environmental baseline information to be gathered for future Plan reviews. It also ensures that proposed mitigation measures are carried out and that no unforeseen impacts occur.

The methodology used in the development of the monitoring programme for the Functional Area Local Area Plan is based on the use of indicators and targets, the assignment of responsibilities and the setting of appropriate time lines. It also includes intervention in the event of an unforeseen occurrence.

Monitoring is carried out by reporting on the set of indicators and targets drawn up for the various environmental aspects and used to describe future trends in the baseline, which enable positive and negative impacts on the environment to be measured. The indicators that are used show changes that would be attributable to implementation of the Plan. In particular, the indicators can also in certain circumstances act as an early warning system should unforeseen impacts occur or conditions deteriorate further or faster than anticipated. For example, water quality indicators describe trends in both improvements and deterioration in water quality. If quality targets are not being reached and water is seen to be unexpectedly deteriorating immediate intervention will be required.

Monitoring will focus on aspects of the environment that are likely to be significantly impacted by the Plan. Indicators and targets have been identified for the main environmental issues in the study area, namely water, biodiversity, cultural heritage and landscape.

The indicators chosen are at a level, which is relevant to the Plan, and are collated and reported on by a variety of Government Agencies, such as EPA, OPW, National Parks and Wildlife Services and different sections within Kerry County Council.

Much of the indicator information required is already being actively collected and reported at a level sufficient to meet the needs of this Plan. The frequency of monitoring is set by relevant legislation.

The monitoring programme for the SEA is given in Table 5.1 to 5.7.

TABLE 5.1: MONITORING PROGRAMME FOR SEA

Environmental Objectives		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
WO1.1	<u>WATER</u> Maintain / improve the quality of surface water	Changes in receiving water quality as identified during water quality monitoring for the SWRBMP conducted by KCC and the EPA	KCC	As per monitoring cycle in accordance with the WFD Monitoring Programme	Achieve good status of surface waters in accordance with WFD by 2015	Investigate source of problem and remedy accordingly
		Biotic quality rating of river waters at EPA monitoring locations	EPA	As per monitoring cycle in accordance with EPA monitoring programme	Improvement or at least no deterioration in surface water quality by 2015	Investigate source of problem and remedy accordingly
WO1.2	Promote the use of Sustainable Urban Drainage Systems (SUDS)	Provision of SUDS compliant drainage plans for proposed developments in study area	KCC	SUDS compliant drainage plans to be provided with all proposed developments	100% compliance with SUDS drainage plans supplied with planning requests	Planning application not to be considered for planning assessment unless necessary drainage plans are also submitted
		Quantified surface water flows from proposed developments as part of planning process Measured river levels	KCC EPA	Hydrological assessments including quantified surface water contribution to be supplied with planning applications River levels logged as per EPA's logging cycle	100% compliance with hydrological assessments supplied with planning requests River levels to remain at current percentiles as per OPW hydrological data	Planning application not to be considered for planning assessment unless necessary hydrological assessments are also submitted

Environmental Objectives		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
WO1.3	Maintain / Improve the quality of groundwaters	Changes in groundwater quality as identified in monitoring programmes conducted by KCC and the EPA under the RBMPs	CCC WFD	As per monitoring cycle in accordance with the WFD Monitoring Programme	Achieve good status of groundwaters in accordance with WFD by 2015	Investigate source of problem and remedy accordingly
WO1.4	Maintain and improve the quality of drinking water supplies	Drinking water quality and bacterial counts and frequency of 'boil water' notices and RAL's notices from the EPA Frequency of 'water shortage' notices	KCC	As required by the population served in the study area and by the requirements of the Drinking Water Regulations	No 'water boil' notices issued. No RALS from the EPA Decrease in the number of water shortage notices issued	Investigate source of problem and remedy accordingly
BO 1.1	<u>BIODIVERSITY</u> Conserve and protect designated habitats and species, including Natura 2000 sites	Designation of additional areas due to biodiversity or geological value.	KCC	-	No loss of protected habitats and species	-
		Percentage of unique habitats and species lost in designated sites through trending of annual/ bi-annual habitat surveys.	DoEHLG			
		Number of Article 6 assessments supplied with planning applications for developments proposed for sites overlying or potentially impacting Natura 2000 sites in study area.	KCC DoEHLG	-	Article 6 assessments to be supplied with each planning application for sites overlying or having a potential to impact a Natura 2000 site.	Planning application not to be considered for planning assessment unless necessary Article 6 assessments are also submitted

Environmental Objectives		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
BO1.2	Conserve and enhance the diversity of habitats and species in non-designated sites	<p>Percentage of unique habitats and species lost in non-designated sites through trending of annual/ bi-annual habitat surveys.</p> <p>Percentage of native tree and broadleaf planted</p> <p>Percentage of proposals close to water incorporating riparian zones.</p>	KCC SWRFB	-	<p>No loss of hedgerows such as Townland Boundary Hedges or roadside hedgerows. .</p> <p>Operators who conduct mechanical hedge cutting should have achieved the Teagasc proficiency standard MT 1302 – Mechanical Hedge Trimming.</p> <p>30% broadleaf afforestation</p> <p>Development of identified non-designated habitats as green belt.</p> <p>Incorporation of riparian zones within proposals close to water systems.</p>	<p>Investigate source of problem and remedy accordingly</p> <p>Requirement in planning permissions.</p> <p>Requirement for provision of bio-diversity plans with planning application where decided by KCC.</p>

Environmental Objectives		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
BO1.3	Protect habitats from invasive species.	New types or increase in coverage of invasive species identified	KCC DoEHLG SWRFB	Identify the presence and location of invasive species in study area catchments.	No new invasive species. Identification of areas populated by invasive species with restrictions placed on such areas. Support initiatives which reduce the likelihood of invasions. Help control and manage new invasive species. Raise public awareness of invasive species and address international obligations.	Investigate source of problem and remedy accordingly
LO1.1	<u>LANDSCAPE</u> Protect scenic landscapes, views, routes and landscape features of value.	Number and type of developments in designated views and prospects	KCC	Review each planning application as submitted.	No significant disruption of views or prospects	--

Environmental Objectives		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
LO1.2	Protect streetscapes in towns and villages	Number of unauthorised developments in the settlements that will impact significantly on their existing character.	KCC	Annually	No unauthorised developments in the settlements of the Plan area that will impact significantly on their existing character.	-
PO1.1	<u>POPULATION AND HUMAN HEALTH</u> Promote the creation of safe high quality environments / urban designs	Number of residential units granted planning permission Number of planning applications accompanied with Urban Design Statements	KCC	Review during the lifetime of the Plan.	Provision of suitable accommodation for the increased population under the lifetime of this Plan Increase in the number of planning applications accompanied with Urban Design Statements	Investigate the source of the problem
PO1.2	Protect and enhance green spaces and amenities available to the public	Number of green spaces and amenities available to the public.	KCC	Review during the lifetime of the Plan.	Increase in the number of green spaces and amenities available to the public.	Investigate the source of the problem

Environmental Objectives		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
PO1.3	Protect and enhance medical educational and community facilities	<p>Occurrence of any decline in human health</p> <p>Number of educational facilities granted planning permission.</p> <p>Number of planning applications for community facilities granted planning permission</p>	<p>HSE</p> <p>DoE&S</p> <p>KCC</p>	Review during the lifetime of the Plan.	<p>No significant deterioration in human health as a result of environmental factors.</p> <p>Increase in the number of educational facilities.</p> <p>Increase in the number of community facilities.</p>	Investigate source of problem and remedy accordingly
PO1.4	Protect and enhance employment opportunities and economic development	Employment rates over the lifetime of the Plan.	<p>DoET&E</p> <p>KCC</p>	Review during the lifetime of the Plan.	Increase employment rates	Investigate source of problem and remedy accordingly

Environmental Objective		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
MAO1.1	Promote sustainable transport infrastructure and practices	<p>MAI1.1a Number of link roads / bypasses provided</p> <p>MAI1.1b Number of private cars on road as a percentage of AADT.</p> <p>MAI1.1c Length of cycle lane provided</p> <p>MAI1.1d Number of cycle shelters provided</p>	KCC	Review during the lifetime of the plan.	<p>Increase in the number of link roads / bypasses</p> <p>Reduction in the number of private vehicles on the road.</p> <p>Increase in the use of public transport.</p> <p>Increase in the number of cycle lanes and parking shelters</p>	-
MAO1.2	Promote sustainable waste management infrastructure and practices	<p>MAI1.2a Quantity of household waste sent to landfill</p> <p>MAI1.2b Quantity of household waste sent for recycling</p> <p>MAI1.2c The number of bring banks and civic amenity facilities provided</p>	KCC	Review during the lifetime of the plan.	<p>Reduction in the quantities of waste sent to landfill.</p> <p>Increase in the quantities of waste sent for recycling.</p> <p>Increase in the number of bring banks provided for the population to 1 bank per 1,000 population</p>	-

Environmental Objective		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
MAO1.3	Promote sustainable telecommunications infrastructure and practices	MAI1.3a Number of houses / premises connected to broadband	KCC	Review during the lifetime of the plan.	Increase in the number of houses / premises connected to broadband	-
MAO1.4	Promote sustainable energy infrastructure and practices (excluding transport)	MAI1.4a Number of energy network upgrades	KCC	Review during the lifetime of the plan.	Upgrading of energy networks (Electricity and Gas) within the plan area	-
MAO1.5	Promote the provision of sustainable drainage infrastructure and practices	MAI1.5a Completion of WWTP upgrades MAI1.5b percentage of applications granted planning permission which require the pumping of wastewaters	KCC	Review during the lifetime of the plan.	Provision and upgrade to provide adequate wastewater infrastructure based on existing and forecasted population demands Reduction in percentage of developments which require the pumping of wastewaters	-

Environmental Objective		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
CHO1.1	<u>CULTURAL HERITAGE</u> Protect Archaeological features	Number of unauthorised developments over the lifetime of the Plan which result in the loss or partial loss of sites of important archaeological status	KCC DoEHLG	Review the County Heritage Plan mid term.	No unauthorised developments permitted over the lifetime of the Plan which will result in the loss or partial loss of sites of important archaeological status.	Investigate source of problem and remedy accordingly

Environmental Objective		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
CHO1.2	Protect Built Heritage	Number of unauthorised developments in protected sites and complexes	KCC	-	No unauthorised developments permitted over the lifetime of the Plan which will result in the loss or partial loss of protected structures or buildings of historic importance. Ensure all planning applications that might have an impact on built heritage are referred to the DoEHLG for comment and that their recommendations are adhered to.	-
CHO1.3	Protect and encourage the development of literary, musical, artistic, sporting and other cultural heritage initiatives	Provide funding as per Kerry Arts Plan 2007-2012	KCC	-	Increase in literary and artistic events during the lifetime of the Plan	-

Environmental Objective		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
ACO1.1	<u>AIR AND CLIMATE</u> Greenhouse Gas emissions	<p>ACI1.1a Number of private cars on road as a percentage of AADT.</p> <p>ACI1.1b Use of public transport</p> <p>ACI1.1c Provision of cycle lanes and walking routes</p>	KCC	Review during the lifetime of the plan.	<p>Reduction in the number of private vehicles on the road.</p> <p>Increased use of public transport</p> <p>Increase numbers of cycle lanes and pedestrian routes in the study area</p>	-
ACO1.2	Air Quality	<p>ACI1.2a Air quality indicators</p>	KCC EPA	Review during the lifetime of the plan.	Maintain or improve ambient air quality through reduction of private vehicle usage	-

ACO1.4	Energy Efficient Buildings	<p>ACI1.4a Number of energy audits conducted</p> <p>Number of Passive / low energy designed buildings permitted / constructed</p>	KCC SEI	Review during the lifetime of the plan.	<p>Increase the number of passive / low energy design buildings permitted / constructed and the making of existing buildings more energy efficient</p> <p>Increase in number of energy audits conducted on existing facilities and new homes</p>	-
--------	----------------------------	----------------------------------------------------------------------------------------------------------------------------------------------	------------	-----------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---

Environmental Objective		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
SGO1.1	<u>SOILS AND GEOLOGY</u> Maximise the sustainable re-use of brownfield sites.	SGI1.1 Percentage of new developments on brownfield sites	KCC	Review during the lifetime of the plan.	Percentage of new applications granted to be on brownfield sites.	-
SGO1.2	Maximise the sustainable re-use of soil within Greenfield sites.	SGI2.1 Percentage of dwelling house planning permissions granted where a depth of 50cm of topsoil is required to be provided within the backgardens.	KCC	Review during the lifetime of the plan.	Percentage of dwelling house planning permissions granted where a depth of 50cm of topsoil is required to be provided within backgardens.	-
SGO1.3	Maximise the sustainable use of soil and geological resources	SGI3.1 Number of geological NHAs and CGS designated in lifetime of the plan	KCC	Review during the lifetime of the plan.	Sites to be selected for NHA and CGS designations and designation process to have been undertaken during lifetime of the plan.	-

Environmental Objectives		Indicator	Responsible Authority	Frequency	Target	Type of Intervention required
FRO1.1	FLOOD RISK MANAGEMENT Promote sustainable flood risk management practices	Number and type of developments in the recognised flooding area	KCC	-	Decrease in the number of properties flooded. Adherence to the guidelines given in the DOEHLG's Guidelines on Flood Risk Management	Investigate source of problem and remedy accordingly
		Provision of flood risk evaluations with proposed developments/ changes to land zoning with emphasis on flood risk management	KCC	-	Mitigation of flood risk and damage to properties caused by flooding	Planning application not to be considered for planning assessment unless necessary assessments are also submitted in areas of known flooding or drainage district benefiting areas with planning applications
		No. of proposed surface water diversions supplied with hydrological assessments	KCC	-	Mitigate against changes to surface water morphology and risk of new flooding areas	Planning application not to be considered for planning assessment unless necessary hydrological assessments are also submitted
